

PROJECT FACT SHEET

Customer: Coles Supermarkets NSW & ACT

Project: Wireless Access Points (WAP) Rollout

Project Profile: Nilsen is currently involved in the Coles Wireless access point rollout covering 211 stores across NSW and the ACT. Led by the Project Management office at Networks in Mulgrave Victoria; Nilsen has three teams of operatives working to upgrade the Coles in-store WAP network.

Working at night the project involves the re-cabling and replacement of wireless access units, replacement of network switches and installation new UPS units. The teams work under considerable pressure to ensure the systematic installation, testing and commissioning of these new networks prior to the stores opening for trading each morning.

The project covers metropolitan and regional stores requiring considerable travel to remote locations. Delivering a project of this size under the above conditions has confirmed Nilsen capability as a reliable and professional data and communications contractor.

Completion Date: November 2014

Man Hours: TBC

LTI's: Zero
