

PROJECT FACT SHEET

Customer: **Baulderstone**

Project: Robina Hospital

Project Profile:

Robina Hospital recently doubled in size to become a 364 bed teaching hospital, now offering a wider range of health services than ever before. The expanded Robina Hospital is part of Queensland Government's ongoing investment into local health services and means a stronger health service and better facilities for the Gold Coast community.

Nilsen completed several contracts for Baulderstone including the Electrical, Communications, Nurse Call and Security packages. Completed in mid-2012, construction involved new H and J Blocks, extensions to A Block and refurbishment of several other blocks.

Specific features of the project included:

- Main Switchboards and associated Power Factor Correction Units
- Photo-voltaic Panels (Solar Power Generation)
- Security CCTV
- Body and Cardiac Protection Areas
- Central UPS Systems
- Nurse Call
- Master Clock System
- Diesel Power Generation (2 x 1500 kVA Generators)
- MATV Cat 6A and Fibre Communication Systems
- Data Centre
- Lighting Control
- EMI Screening
- Lightning Protection

This is now the largest completed project to date for Nilsen in the state of Queensland. Thanks to the project management and site team, Nilsen is now a major player in Queensland for Hospital contracts.
