

PROJECT FACT SHEET

Customer: Coles Supermarkets WA

Project: Wireless Access Points (WAP) Rollout

Project Profile: Nilsen Networks were engaged for the installation of Wireless Access Points (WAP) Rollout in 83 stores across both metropolitan and regional WA.

Working at night, the project included the re-cabling and replacement of wireless access units, replacement of network switches and installation new UPS units. The teams worked under considerable pressure to ensure the systematic installation, testing and commissioning of these new networks prior to the stores opening for trading each morning.

Engaging a team of 4 highly specialised data and communications staff to perform the installations, Nilsen commenced work in April 2014, completing the works in November 2014.

Delivering a project of this size under the above conditions has confirmed Nilsen's capability as a reliable and professional data and communications contractor.
