

PROJECT FACT SHEET

Customer:

John Holland

Project:

Qantas Domestic Terminal Interim Refurbishment Stage 2

Project Profile:

The scope of work was to demolish, extend where required, install and commission new electrical , telephone and data systems, access control and CCTV, EWIS and earthing systems for:

- Extensions to the Ground Floor (including baggage handling areas)
- Extensions to the First Floor
- Extensions to the existing Check In areas
- Installation of new Communications room and relocation of existing services

The airport was still operating while the works were being undertaken. Areas under operation included security screening, Check In counters and Communication services, Isolation of main power supply during changeover works coordinated with Qantas over three hour windows.

All works were staged with multiple night shifts being worked.

Works commenced in November 2008 and was completed November 2009.

Connected to the past, transforming the future
